***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1, 3, 8, 10, 15, 17, 22, 24, and 34-35, drawn to antibodies, classified in class 530, subclass 387.1.
- II. Claims 4, 11, 18, 25, and 32-33, drawn to DNA, classified in class 536, subclass 23.1.
- III. Claims 38 and 44, drawn to a method of prevention, classified in class 424, subclass 130.1.
- IV. Claim 45, drawn to methods of detection, classified in class 435, subclass 7.1.

The inventions are distinct, each from the other because of the following reasons:

Invention I, drawn to an antibody protein and Invention II drawn to a DNA molecule are distinct since they are products with a different structure and biological properties. The protein is made of amino acids whereas the nucleic acid molecule consists of nucleotides. Further methods known in the art used to make the polypeptide require different reagents and parameters from the methods of making the nucleic acid encoding the protein and the method of making the polypeptide does not require the nucleic acid. For instance, the protein can be made by Merrifield chemical synthesis or affinity chromatography.

Inventions I and III & IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different

process of using that product (MPEP § 806.05(h)). In the instant case the antibody can be used to provide protection in vivo as claimed, or alternatively may be incorporated into an in vitro assay to detect the presence of the immunogen, also as claimed.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their separate classification and their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark Navarro whose telephone number is (571) 272-0861.
